FAKULTAS ILMU KOMPUTER UNIVERSITAS ESA UNGGUL 2019

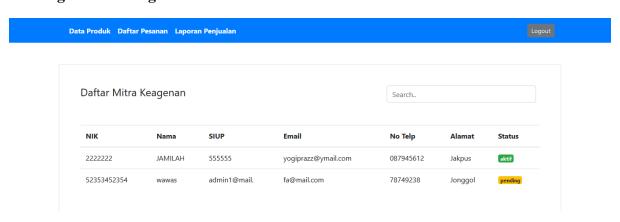

# Kebutuhan Fungsional

#### A. PT XYZ

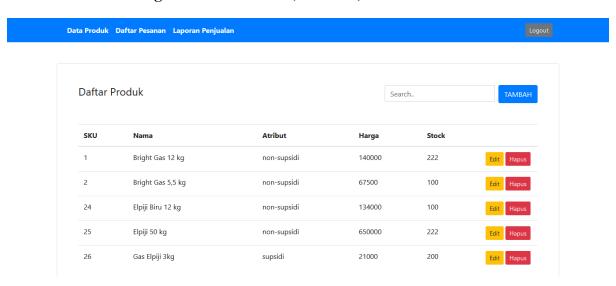

#### 1. Login

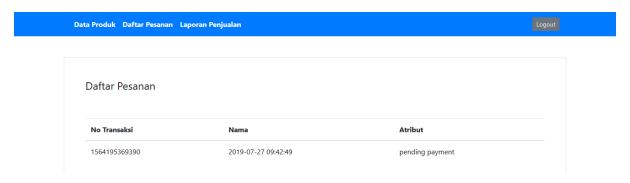

#### 2. Mengelola Data Agen

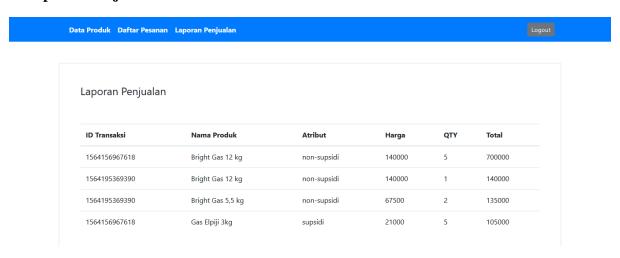

## 3. Data Master - Mengelola Data Produk (Gas LPG)

## 4. Mengelola Transaksi Penjualan

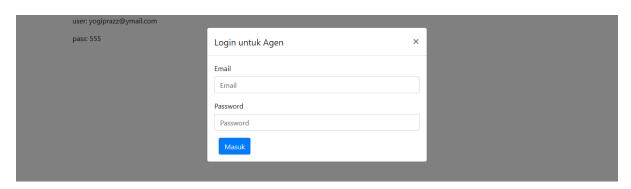

## 5. Laporan Penjualan

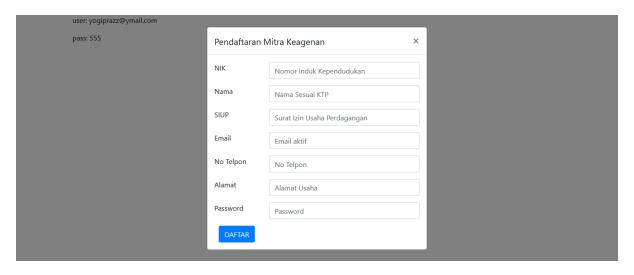

# B. Mitra Agen

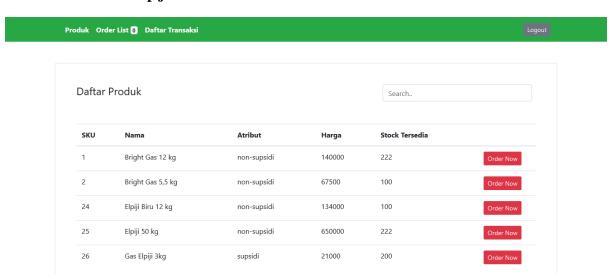

## 1. Login

#### 2. Pendaftaran

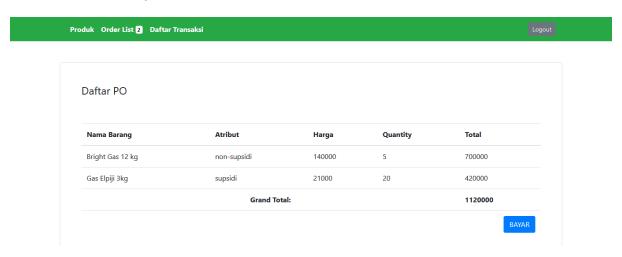

## 3. Pemesanan Gas Elpiji

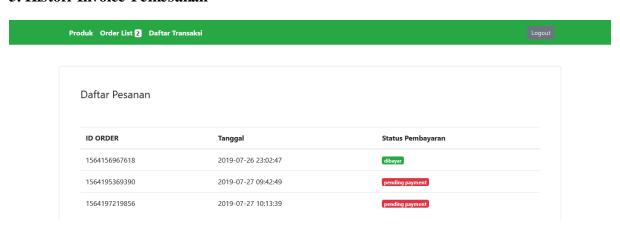

Jumlah Pemesanan Masukan Quantity Daftar Produk Masukan Cart SKU Atribut Stock Tersedia Harga Bright Gas 12 kg 140000 non-supsidi Bright Gas 5,5 kg non-supsidi 67500 134000 Elpiji Biru 12 kg Elpiji 50 kg non-supsidi 650000 Gas Elpiji 3kg supsidi 21000

## 4. Transaksi Pembayaran

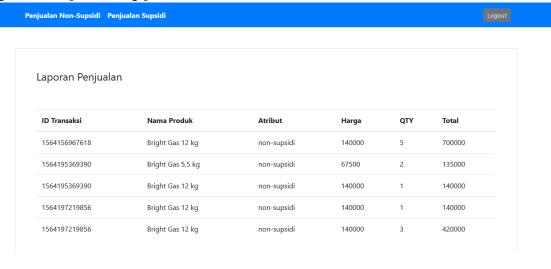

#### 5. Histori Invoice Pemesanan

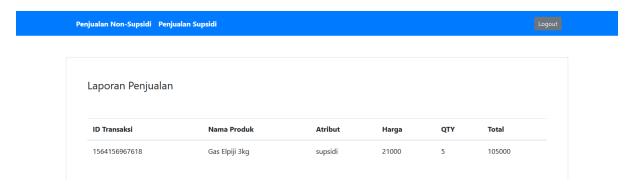

## **B.** Pertamina

## 1. Laporan Penjualan Elpiji (Non Subsidi)

#### 2. Laporan Penjualan Elpiji (Subsidi)

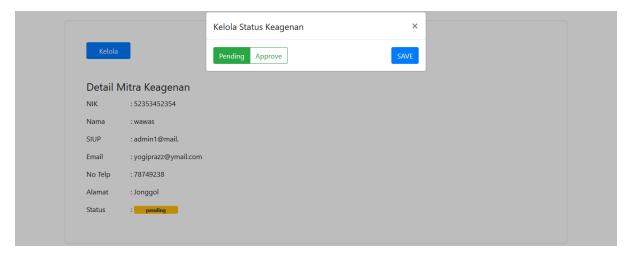

## Kebutuhan Non Fungsional

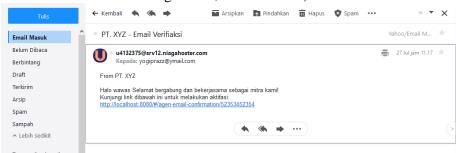

#### 1. Verifikasi Email Konfirmasi Otomatis

Flow verifikasi:

- 1. Agen daftar > status akun "pending"
- 2. Admin akan melakukan aktifasi > status akun "approve"
- 3. Sistem akan mengirimakan email konfirmasi
- 4. Agen klik link aktivasi > status akun "aktif"

 Capture email konfirmasi (test di localhost dengan xampp masuk spam. Contoh dibawah REST API sudah live di niagahoster, masuk inbox)

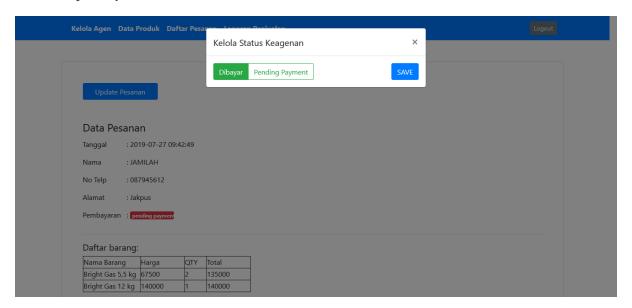

#### 2. Validasi Transaksi

- Cek pesanan

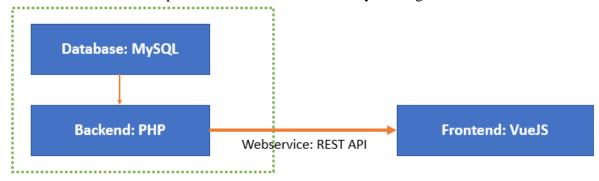

- Validasi pembayaran

#### 3. Webservice: Pemrosesan Data Tersebar

Semua fitur backend merupakan Webservice. Arsitekturnya sebagai berikut:

## **Database Log History**

#### 1. Trigger Database

Tabel agen di-trigger oleh tabel log\_agen\_approval untuk merecord waktu perubahan status keagenan.

Sample source coding:

```
DELIMITER $$

CREATE TRIGGER agen_approval
    BEFORE UPDATE ON agen
    FOR EACH ROW

BEGIN
    INSERT INTO log_agen_approval
    set nik = OLD.nik,
    status_sebelum = OLD.status,
    status_sekarang = new.status,
    tgl_approval = NOW();

END$$

DELIMITER;
```

#### Capture:

#### Live Demo
